for Defence Unmanned Systems

COMBAT-PROVEN UNMANNED DEFENCE SYSTEMS

The only European think-tank with direct combat expertise

Europe has entered an era where hesitation is weakness.

Where defence technology decides before politics react.

In today's Europe, there are two kinds of defence audiences.

Those who understand that Ukrainian battlefield experience matters.

And those who still believe they can theorize how to fight Russia.

The first group listens - to the hard-earned expertise of elite Ukrainian commanders who have fought, adapted, and succeeded in modern high-intensity war.

The second group consists of "paper generals" - professionals of reports, briefings, and conference rooms, fighting wars that exist only on slides and intelligence summaries.

EADUS
European Association
for Defence Unmanned Systems

EADUS addresses those who choose to listen.

Because in real war, experience and expertise matters — and arrogance gets people killed.

EADUS aims to operate as a pan-European NGO, defence think-tank, and innovation platform built by combat-practitioners. Not commentators.

People who understand robotic defence systems and war not from slides, but from combat-deployment.

From consequence. From reality.

EADUS isn't just another institution.

It is a bridge between innovation, elite battlefield experience, and strategic leadership.

EADUS advances and safeguards autonomous and robotic defence capabilities across air, land, maritime, underwater, and space domains — together with the interoperability ecosystems that turn separate machines into unified operational power.

Because modern defence is no longer about isolated platforms. It is about coordination. Experienced elite warriors, speed of decision, scalability, trusted human in-the-loop autonomy. A power guided by human judgment.

Our role is simple:

Advocate the voice of elite combat operators.

Advocate and accelerate what works.

Integrate efficient combat-proven platforms.

Safeguard Europe’s technological sovereignty - no place for Chinese components and technology.

Combat-proven technology changes modern warfare.

Front-line experience decides outcomes.

EADUS brings both to the table.

No ideology.

No bureaucracy.

No theatre.

Only combat-proven capability.

Built in Europe.
